

Guidelines for the Wind-resistant Design of Seismically Base-isolated Buildings

Contents

1. General

1.1 Scope

1.2 General concepts

1.3 Considerations for the wind-resistant design of seismically base-isolated buildings

2. Estimation of wind loads

3. Design of seismic isolation system

3.1 Design considerations

3.2 Verification of safety under strong wind action

4. Design of seismic isolation devices

4.1 Items of evaluation

4.2 Evaluation of wind resistant performance

Appendix

A1 Performance tests for seismic isolation devices

A2 Characteristics of seismic isolation devices for wind load resistance

A3 Acting time for an extreme storm event

A4 Simplified method for evaluating cumulative wind-acting times for different wind speeds for the estimation of cumulative fatigue damage

A5 Simplified method for evaluating wind response of isolation system

A6 Example wind response evaluation of seismic isolation system

Members of sub-committee for wind-resistant design in technical committee in JSSI (as of September 2016)

Takeshi Ohkuma (chair), Yasuo Takenaka (secretary), Keisuke Yoshie (secretary),

Haruyuki Kitamura, Kazuo Tamura, Masahiro Matsui, Hachinori Yasui,

Yutaka Asami (until March 2009), Daiki Sato, Kazuyoshi Nishijima

Members of Working Group of Estimation of Wind Response of Seismically Base-isolated Buildings

Keisuke Yoshie (chair), Takeshi Ohkuma, Masahiro Matsui, Hachinori Yasui,

Yutaka Asami (until March 2009)

Members of Working Group of Seismic isolation devices

Yasuo Takenaka (chair), Haruyuki Kitamura, Kazuo Tamura
